This prevents deterioration an. It will take a surprising number point plunged through the roof of the mouth to a point just behind and between the eyes, piercing the brain. The muscles are relaxed and the feathers come out easily.

Dry Picking Is Best. Capons should always be dry picked, as they look much better and as some of the feathers should be left on. The feathers of the neck and head, the tail feathers, those a short way up the back, the feathers of the last two joints of the wing, and those of the leg, about one-third of the way from knee to hip joint, should be left on. These feathers, together with the head of the capon, serve to distinguish it from other classes of poultry on the market, and consequently should never be removed. In packing, be careful not to tear the skin. Bad tears, poultry specialists of the United States department of agriculture say, should be sewn up. Capons scalded and picked bare bring very little, if any, better prices than other poultry Federal Inspector Ascertaining Conci-
